

HT Naturals Inc. Factory Certification for Fair Labour Standards

We at HT Naturals believe strongly in maintaining a safe and comfortable worksite with happy workers. This extends to our manufacturing in off-shore facilities. HT Naturals inspects for any labour violation as well as safety in the following areas: Fire, Health and Welfare, Living standards and Production equipment.

Each facility is inspected by our Product Director prior to our agreement to manufacture. We require a 3rd party inspection certificate to be produced or we request an inspection to be carried out by a 3rd party inspection facility (<http://www.asiainspection.com/our-solutions> look at: Factory and Social Audit). Our product director is also in the factories several times per year to ensure that production is carried out in an ethical manner.

Our standards are higher than those set by “Fair Labour Association” (<http://www.fairlabor.org/all/code/index.html>) and we set a minimum of 8/10 on inspections before we will use a factory. In any area that we see room for improvement, we request this change and if required, we will fund said changes. We have zero tolerance for child labour or human rights abuses.

Worker conditions in the off-shore garment industry have been poor in the past but this has changed as more awareness is given to this area and skilled labour gets scarcer in China’s industrial areas.

At HT Naturals we know that producing a good quality garment means keeping everyone healthy, happy and safe.
